

# Polyester Kit

**LIDERKIT™**  
INNOVATIVE TECHNICAL BODY KITS

## MODEL 650. Poliester 2mm

For the Polyester 2 mm model by LIDERKIT, side and front walls are made of polyester sheets, reinforced with fiberglass 2mm thick. This sheet is also internally reinforced with vertical steel omega profiles.

In contrast to aluminium kits, this type of walls has one only exterior surface. The profiles used are in “2 pieces” and external face is free of rivets and sealing.

This model is an alternative to the Aluminium kit, with similar weight and easier to repair.

## MODEL 660. Polyester 3.2mm

For the Polyester 3.5 mm model by LIDERKIT side and front walls are made of polyester sheets, reinforced with fiberglass 3.5mm thick. This sheet is also internally reinforced with vertical steel omega profiles.
